Research Positions

Graduate Research Assistant, Department of Earth and Planetary Science, Johns Hopkins
University, Baltimore, Maryland. August 2011 – 2015

- Built semi-automated rainfall prediction models, with various machine learning techniques such as Tree-based ensemble models (**Random Forest** and **Boosting**), **Support vector Machines** and **Artificial Neural Network**, with **R**, HTML, JavaScript, and CSS.
- Employed various statistical analysis and data mining techniques using **Python** and **R** to understand interactions of atmospheric waves and their impacts on rainfall using large volume climate data.
- Analyzed large volume climate data, using **Python** and **R**, to investigate future climate conditions
- Completed many side-projects on big data using **Spark** (e.g., movie recommendation, web server log analysis, text mining and entity resolution and click-through prediction; available on my [website](#))
- Worked on many other side-projects using R (available on my [website](#))

- In addition to the data science courses I have done in grad school, I have taken more than 20 edx, coursera and Udacity data science courses with [R](#), [Spark](#), [Python](#), [Matlab](#), and [Hadoop and MapReduce](#) (certificates on my [website](#))

Graduate Research Assistant, Department of Natural Resources and the Environment,
University of Connecticut, Storrs, CT 2009 – May 2011

- Built and evaluated a model that predicts Nile River flow. Further, examined possible impacts of climate change on river flow using different climate scenarios.
- The main tools I used in this study: **R**, **Python** and GIS.
